

# A GUI Application with Multiple Styles

Prof. Jonathan Lee (李允中)

Department of Computer Science and  
Information Engineering  
National Taiwan University

# Homework: Requirements Statements

- ☐ A GUI Application consists of various types of widgets such as window, scroll bar, and button.
- ☐ Each widget in the GUI application has two or more implementations according to different look-and-feel standards, such as Motif and Presentation Manager.
- ☐ The GUI application can switch its look-and-feel style from one to another while the widgets are being created.
